

TEAM 6 - README FILE

Jin Weijian Víctor, Álvaro Palancas Siguero, Javier Seguí Corbatón.

INSTRUCTIONS

To compile the code in the Linux terminal correctly you must ensure you are in the right directory, once you have checked that the files we want to run (in this case: `wizards_finalversion.py` ; `semaphores_finalversion.py`) exists in such directory, proceed to write in the terminal (since we are using right now python3 version of python) `python3 wizards_finalversion.py` or `python3 semaphores_finalversion.py`, to run the code you want respectively.
